IPTV BILLING · PANEL AUTOMATION · BRANDED TV APP

BillingPortal

The all-in-one platform built for IPTV resellers — billing, payments, your panel and your own branded app, working together.

XUI One

NXT

Best Panel

Stripe · Venmo · Cash App · Zelle · PayPal

Android TV · Fire TV · Google TV

Your business outgrew the panel, the spreadsheet — and WHMCS.

Running an IPTV service means creating lines, collecting money through half a dozen apps, chasing renewals, answering “it stopped working” and keeping your panel credits topped up. BillingPortal does that work for you — automatically, around the clock, under your own brand.

Coming from “no billing system”

Panel + Venmo + text messages + a spreadsheet works — until it doesn't.

- **No more chasing payments.** Invoices, reminders and receipts go out on their own.
- **Venmo, Cash App, Zelle and PayPal payments are matched automatically** — scanned every 5 minutes and applied to the right invoice.
- **Lines renew themselves** the moment a customer pays — no logging into the panel.
- **Non-payers are handled for you** — reminders, then suspension, then cancellation, on a schedule you set.
- **Customers serve themselves** — credentials, channel packs, upgrades, invoices and support in their own portal.
- **Real numbers** — monthly recurring revenue, what's still due this month, and whether your panel credits will cover next month.

Coming from WHMCS

WHMCS was built to bill web hosting. IPTV was never its job.

- **Built for IPTV from day one** — lines, connections, bouquets, trials, credits and panels are first-class, not bolt-ons.
- **No third-party IPTV modules** to license, patch and hope keep working after an update.
- **Streamlined screens** — no domains, servers, cPanel or hosting jargon your staff has to ignore.
- **A branded TV app your customers log into with the same account** — WHMCS has nothing like it.
- **The Panel console:** run your reseller panel from Admin — live viewers, disconnects, credits, reconciliation.
- **We migrate you** — clients, services, invoices and years of ticket history come across.

reminders, suspensions and
cancellations on your
schedule

“Everything is so much more streamlined than WHMCS — which was never intended to be an IPTV billing system.”

— The BayFront Cloud team

What you get that the alternatives don't

Capability	Panel + spreadsheet	WHMCS	BillingPortal
Built specifically for IPTV resellers	—	No (web hosting)	✓
Creates the panel line automatically after payment	Manual	3rd-party module	✓ XUI One · NXT · Best Panel
Renews the line automatically when an invoice is paid	Manual	3rd-party module	✓
Venmo / Cash App / Zelle / PayPal matched automatically	—	—	✓ every 5 minutes
Stripe card payments & auto-pay	—	✓	✓
Reminder → suspend → cancel schedule	—	✓	✓ + suspends the line on the panel
Customer portal (desktop + mobile)	—	✓	✓ built around streaming
Customers pick their channel packs (bouquets)	—	varies by module	✓
Upgrade / change plan (connections, adult, term)	—	generic	✓ tier grid, next-renewal or now
Free-trial limits per customer	—	—	✓
Your own branded TV app	—	—	✓ Android TV · Fire TV · Google TV
Profiles, Favorites & Continue Watching saved to the customer's account	—	—	✓ follows them to every device
Run your reseller panel from Admin (live viewers, disconnect, credits)	—	—	✓ Panel console
Billing ≠ panel reconciliation	—	—	✓
Panel credit forecast ("covers next 30 days?")	—	—	✓
Sub-resellers buy credits — loaded onto their panel automatically	Manual	3rd-party module	✓ XUI One · NXT
Sports events guide & "streams not loading?" ISP fix-it hub	—	—	✓
Storefront layouts you switch in one click	—	theme work	✓ 4 layouts
Brand colours on portal, shop and TV app, from Admin	—	theme work	✓ no app rebuild
Device ID & plain-English app logs per customer	—	—	✓
Refer-a-friend program	—	affiliate commissions	✓ built in
Seasonal pause — login kept, no bills	Manual	suspend by hand	✓ customer presses Pause
Playlist links (M3U · HLS · guide), one-tap Copy	in the panel	—	✓ portal, email & Admin
Your brand, your domain, one-click SSL	—	theme work	✓ from Admin
Migration of your existing customers	—	—	✓ WHMCS or panel import

WHMCS column reflects a standard WHMCS install; IPTV features there depend on separately licensed third-party modules.

From order to “it’s playing” — without you lifting a finger

Every step a reseller used to do by hand is automated, logged and visible in Admin.

Four pillars, one system

One account, everywhere

The same customer login works on the website portal, the mobile portal and your TV app. Their plan, credentials, invoices, profiles and watch history are all in one place — yours.

1 login

Get paid — however your customers like to pay

Most IPTV customers pay by Venmo, Cash App or Zelle. BillingPortal reads the payment notifications from your inbox and applies them to the right invoice on its own — no screenshots, no “did you get my payment?”.

Stripe cards

Pay by card on your checkout with **your own Stripe account**. Saved cards and automatic monthly charging. Webhooks rescue payments that confirm late, and duplicate deliveries are blocked.

Venmo · Cash App · Zelle · PayPal

Your payment inboxes are **scanned every 5 minutes**. Each payment is matched to its invoice by reference and amount, marked paid, and the line renews — all hands-free.

Account credit

Customers can add funds; credit is **applied automatically** to unpaid invoices every day. Paid credit and complimentary credit are tagged separately so your revenue stays honest.

Invoicing that fits recurring streaming

- **One combined invoice per customer** — every service due in the cycle, one bill.
- **Monthly, 3-, 6- and 12-month terms** — due dates follow the real package length.
- **Coupons** for a set number of billing cycles, plus a ready-made **win-back** offer.
- **Custom prices** for family, friends and special deals — tick “Custom price” and a price change never touches them.
- **Manual invoices** from any client page; **resend receipts** with one click.
- **\$0 and free-trial orders settle themselves** — no false “past due”.
- **Protection built in:** never bills the same period twice, stuck paid orders are healed, abandoned carts are cleaned up.

Reminders & dunning — on your schedule

- **Editable reminder ladder** — e.g. 3 days before, 1 day before, due day, 3 and 5 days after.
- **Automatic suspension** of overdue services — the line is disabled on the panel too.
- **Automatic cancellation** after your grace period, with the panel line removed.
- **Pay → back on instantly** — suspension lifts the moment the invoice is paid.
- **Service notices always arrive**, even if the customer opted out of marketing email.
- **Every email is logged** on the client’s page, so support can see exactly what was sent.

Know exactly where the business stands

The dashboard answers the questions resellers ask every morning — how much comes in this month, who still owes, and whether the panel has enough credits for the renewals ahead.

Admin dashboard — MRR, revenue this month, due today, still due this month, orders and sign-ups waiting, and the Panel Status credit forecast (sample data).

Real MRR

Monthly recurring revenue from live subscriptions — not last month's cash — with the change month over month.

Still due this month

Every subscription due between today and month-end, plus who has already paid early.

Panel credit forecast

Credits on each panel, renewals due in 7 and 30 days, and a clear "covers every renewal" — or how much to top up.

Panel reachability

Green/red status for every panel, checked every minute, so you know before your customers do.

Reports

Financial, payments, invoices, clients, products and support reports, a 12-month revenue chart and PDF exports.

Alerts that matter

Paid-but-not-provisioned alerts, failed renewals queued for automatic retry, and unpaid-invoice badges.

Due today

What falls due today, what's already paid and what's still to collect — one click opens that list.

Orders & sign-ups

Orders placed today, orders waiting to be set up and sign-ups waiting for approval.

Tiles on every list

Clients, Invoices, Orders, Tickets and Transactions open with count tiles — tap one to filter the list.

Plug in your panel. Billing drives it from there.

Panels are modules you add in Admin — pick the type, enter the login, press **Test**. Run several panels side by side (for example a main panel and a backup). Every line action is automatic, retried if a panel hiccups, and logged.

XUI One

Reseller API or web-panel mode — so regular resellers without API access are fully supported. Credits, packages, lines, channel packs, trials.

NXT

Provisioning, renewals, cancellations and credentials read back after creation so customers never get a dead password.

Best Panel

Modern REST integration including balance, watch history, live sessions, sub-resellers and provider tickets.

Everything happens on the panel for you

- **Create** the line on payment — right package, connections and channel packs.
- **Renew** on payment; **suspend** and **re-enable** with billing; **remove** on cancellation.
- **Free trials** with a per-customer limit, provisioned instantly.
- **Safety caps** on credits per order; a lock stops double-provisioning.
- **Retry queue** — a panel timeout never loses a renewal.
- **Sub-reseller credits** — sub-resellers buy credit packs in their portal; once paid, the credits load onto their reseller account on the panel automatically, with a receipt.
- **True line status** in the portal and Admin: active, expired or disabled on the panel, and "streaming now".

Catalog in minutes

- **Import from Panel** — reads your live packages and builds the product grid (connections × term) in one click.
- **Tier grid products** — 1–5 connections, with or without adult, 1/3/6/12 months.
- **Change Plan / Upgrade** — customers move up, down or sideways; now or at next renewal.
- **Add Existing Service** — attach lines you already sell, perfect for onboarding.

Products — categories, tier grids, panel packages and trials.

A customer's service — credentials, refresh, renew, upgrade, suspend, apply coupon.

Never log into your reseller panel again

Admin → **Panel** puts your whole reseller panel inside your billing system — every line, who is watching right now, your credits and their history — each line tied to the customer who pays for it.

The screenshot shows the 'Panel' console interface. On the left is a sidebar with navigation options: Overview, Dashboard, Clients, Panel (highlighted), Orders, Reseller Leads, Products, Variants, Coupons, Tickets, and Invoices. The main area is titled 'Panel' and has tabs for Overview, Lines (selected), Live, Credits, Tickets, Reconcile, Activity, and Settings. Below the tabs is a section for 'Lines (18)' with a search bar and filters for 'All statuses', 'Billed and not billed', and 'Expiry, soonest first'. A 'Create line' button is also present. The table below lists several lines with their details:

Username	Status	Conn.	Expires	Last Watched	Billing	Action
chrisreyes106	Expired	0 / 3	Sep 23, 2026 expired 1d ago	19 h ago	Chris Reyes #2106 · Premium 3 · Active	Open
steveprice112 Hotel lobby TV	Active	0 / 1	Sep 25, 2026 within a day	2 days ago	Steve Price #2112 · Premium 2 · Active	Open
sarahnguyen101	Active	0 / 2	Sep 28, 2026 in 4d	4 h ago	Sarah Nguyen #2101 · Basic 1 · Active	Open
julieurussell113	Active	0 / 2	Oct 2, 2026 in 8d	2 days ago	Not billed	Open
mikecarter100	Active live	2 / 2	Oct 3, 2026 in 9d	now	Mike Carter #2100 · Premium 2 · Active	Open

Lines — status, connections, expiry, last watched, and the billing customer next to every line (sample data).

Every line

Search by username, note, customer or email. Filter active, trial, expired, disabled, watching now, billed or not billed.

Watching now

Who is streaming, what channel, which app, which ISP and for how long — refreshed every 20 seconds.

Disconnect

End one session or every session on a line — e.g. a shared password — with a confirmation step.

Logins

Reveal username, password and playlist links; set or generate a new password — billing is updated so email and the app keep working.

Add time & create

Add a package, create trial or paid lines — with credit cost shown, and protected so a double-click never charges twice.

Channel packs & notes

Change a line's bouquets, notes and contact email — the customer's billing record follows.

Live viewers, credits and a billing check-up

Live — every stream playing right now, with Disconnect.

One line — package, expiry, billing, sessions, logins, channel packs.

Credits — balance and the full credit history.

Reconcile — billing and panel compared, problems listed.

Reconcile finds the money leaks

- **On the panel, not billed** — lines nobody is paying you for.
- **Billed, missing on the panel** — customers paying for a line that's gone.
- **Status mismatches** — active in billing but disabled on the panel, or the reverse.
- **Date drift** — panel expiry and billing due date out of step.

Built for teams

- **Every change is logged** — who did what, to which line, when, and the credits it cost.
- **Choose who can make changes**; everyone else can view.
- **Provider tickets** — open and follow tickets with your panel provider from Admin.
- Works with **XUI One** (including regular resellers) and **Best Panel**.

A portal your customers actually use — so they stop texting you

Everything a subscriber needs, in light, dark or midnight themes, under your brand and on your domain.

My Services — status, credentials, next due date, and one-click actions.

Change Plan — upgrade, same tier or downgrade, priced live.

Manage Channels — customers choose their channel groups.

Services & logins

Show credentials, email them to themselves, see whether they're streaming, turn the app on/off per service, copy any playlist link in one tap.

Pay & history

Pay invoices, view payments, add account credit, download PDF invoices and yearly reports.

Trusted Contacts

Let a spouse or family member manage the account with their own login — billing only, support only or full access.

Answers before they ask

"Streams not loading?" — step-by-step fixes for each internet provider.

Sports Events — what's on, which channel, live now.

? Knowledge base

Installation guides, billing help and troubleshooting, with PDF download or **Email Me**. Articles can be hidden and brought back later.

✉ Support tickets

Photos and files, email notifications on every reply, and a "Recommended Article" card when staff attach a guide.

★ Announcements

Outage notices and news pinned in the portal, with links to the right help article.

Mobile portal

A phone-first portal with a tab bar: pay an invoice, show credentials, manage channels, change plan, open a ticket with a photo from the camera roll — all in a few taps.

Your storefront — plans, free trial, live events and a shopping cart.

A shop that sells the way **you** sell

Choose how your plans are presented — classic product cards, side-by-side plan cards, a step-by-step plan builder or a compare table — in Admin, and switch any time. Every layout uses the same cart, coupons, referral discounts and checkout.

Layout 1 · Plan cards — 1–5 device buttons on each plan and a Monthly / 3 / 6 / 12-month switch with the savings shown.

Layout 2 · Plan builder — devices, package, term, running total.

Layout 3 · Compare table — tap any price to buy.

Built from your catalog

Plans, device counts, terms and prices come straight from your products — built in minutes with **Import from Panel**.

No pointless questions

One package? The builder skips "which package". One term? No term switch. Devices and extras are listed underneath.

Sign in inside the cart

Customers create an account or sign in right from the cart and carry on to pay. Free trials are limited per customer.

Your colours everywhere — in one click

Ten palettes or any brand colour. Buttons, links, prices, the sign-in page and the Midnight background all follow across the portal, shop and mobile portal. Choose the look new visitors see first (Light, Dark or Midnight) and whether customers can switch — with a live preview before you publish.

Ocean Blue

Emerald

Crimson — one click apart

Admin → Look & Feel — palettes, default look, shop layout, live preview.

Admin → App Theme — the TV app's colours on its real screens.

...and your TV app follows

Background, accent, selection highlight, sign-in tabs and cursor colours are set in Admin. Customers see the new look the next time they open the app — no new app build, no reinstall. **Admin itself** comes in Light, Dark or Midnight — each staff member picks their own.

Classic blue

Emerald

Crimson (one reseller's brand)

An app with **your** name on it — powered by your billing system

Android TV, Fire TV / Fire Stick, Google TV, and Android phones and tablets. Customers sign in with their portal account — no playlist URLs to type — and it looks and feels like the premium players they already know.

Home — featured event, today's sports and discovery rows (shown in one reseller's brand).

Live TV

Categories, search, Favorites, Recently Watched, channel logos and now/next. Channels **reconnect themselves** and ride out stream hiccups; a “No internet” notice shows if the line drops.

TV Guide

A timeline guide with a category rail, a Favorites filter, **search**, a playlist picker and channel logos — built for the remote.

Movies & Series

Posters, details, trailers, sorting, **Continue Watching** and resume where you left off, episode titles on screen.

Sports

Today's games by league with one-press tune-in, and a featured event on the home screen.

Profiles & parental controls

Netflix-style profiles, and an optional PIN that hides adult categories — the PIN can be reset from the portal.

Updates itself

New versions install from inside the app, with resume if the download is interrupted — no Downloader codes again.

A Device ID on every TV — support looks it up

Full-screen player with now/next

One-press updates

Your customers' experience lives in **your** system

Profiles, Favorites and Continue Watching are stored on the customer's account in BillingPortal — not on the device. New TV? Reinstall? Second home? They sign in and everything is exactly where they left it. That is something no generic player — and no WHMCS install — can give your customers, and it's a big part of why they stay with you.

Profiles

each family member with their own favorites and history

Favorites

saved to the account, grouped by playlist

Resume

Continue Watching and Recently Watched on every device

TV Guide

Movies with Continue Watching

Live TV with Recently Watched & Favorites

Sports by league

Run it from Admin and the portal

Your logo **and** colours are served from your billing system — change them without a new app build. Customers manage profiles and their parental PIN in the portal's **My App** tab; support can reset a customer's app remotely. Crashes and playback problems are reported to Admin automatically, so you can fix issues you'd never otherwise see.

+ Also in the app

- Device ID + plain-English app logs in Admin
- "Channel off air" notice instead of endless spinning
- DTS surround sound built in
- Portal login **or** playlist login; multiple playlists
- Pay invoices from the TV · optional VPN
- Roku app — coming soon**

Support, marketing and admin — all in one place

Client page — revenue, services, invoices, tickets, emails, credits, app controls.

Support tickets — open, answered, customer replied, on hold.

Clients

Full history per client, shadow-login to see what they see, status lifecycle (active, inactive, closed, banned), sign-up approvals, trial counters and notes.

Tickets

Close, on-hold and reopen, reply-and-close, merge duplicates, private attachments and recommended articles.

Campaigns

Email every customer — or just one product group — with your templates, e.g. a price change or a new-channels announcement.

Email that looks like you

Send through **Microsoft 365** or **Google Workspace**. Every template uses brand tokens — name, logo, links — and a visual editor.

Knowledge base editor

Visual editor with paste-from-Word and clipboard images, ordering, categories, PDF export and hide/show.

Refer a Friend

Customers share their own link; the friend gets money off the first order, the customer earns a free month once the friend has paid twice. Your rules; off until you turn it on.

App support

Type the Device ID a customer reads off their TV to see that device, its app version and what went wrong.

Sub-resellers

A reseller sign-up form feeds a leads list in Admin. Sub-resellers see their live credit balance in their portal and refill it themselves — no manual top-ups.

Roles

admin users & permissions

Coupons

one-time, recurring, win-back

Bundles

combos across panels

Reports

revenue, payments, clients

Snowbirds pause — they don't cancel

Customers who leave for the season press **Pause** instead of Cancel. They keep watching until the time they paid for runs out; then the line is switched off but **kept** — same username, password and playlist links — with no bills, reminders or suspensions. **Resume** creates one invoice; paying it switches them straight back on.

Pause on an active service, a scheduled pause with "Don't pause", and a paused service with Resume.

You set the rules

How long the login is held (6 months by default), pauses a year (3), on or off — Admin → Modules. Free for customers.

No bills, no dunning

Renewals, reminders and overdue suspensions skip paused services. Paused customers still get your news.

Nobody watches free

Paused only once the panel confirms the line is off. Not back in time? Reminders at 30 and 7 days, then it's cancelled.

Every playlist string, one tap away

Some apps only take a single playlist link — scan a QR code on the TV, paste one string, done. Customers copy the **M3U**, **M3U (HLS)** or **TV guide** link straight from My Services.

- All three links are in the **welcome email** and "Email Creds".
- Staff see the same links, with Copy, on the client page in Admin.
- Built from each panel's server address — nothing to type.

Whitelabel, secure, and easy to move onto

100% your brand

- **Your own instance** — your database, your domain, your customers. Nothing shared with other resellers.
- **Branding from Admin** — name, logo, company, support email; the portal, emails, invoices, PDFs and knowledge base all follow.
- **Your domain + one-click SSL** from the Setup screen.
- **Your own Stripe account** and your own payment handles — money goes straight to you.
- **Your own TV app**, name, logo and colours.
- **Look & Feel** — ten palettes or any colour, the default look and your shop layout.

Security & reliability

- **Nightly database backups**, kept for weeks and copied to a second server — restores are tested.
- **SSH brute-force protection** with a live dashboard: bans, unbans and a whitelist.
- **Login protection** — repeated wrong passwords lock that account and address; clear locks in Settings; admin attacks are emailed to you.
- **Only HTTPS reaches your system** — internal ports are closed to the internet.
- **Private ticket attachments**, per-install signing keys, admin roles and audit logs.
- **Server resources** (CPU, memory, storage) right in Settings.

W Moving from WHMCS

We import your clients, services (with their panel lines), invoices and payment history — and your ticket history comes too. Nothing changes on the panel, so every line keeps playing through the move.

✦ Starting from a panel only

Import from Panel builds your catalog from your live packages; **Add Existing Service** attaches each customer's existing line to their new account — no new lines, no downtime.

✓ Go-live checklist

A pre-flight check confirms branding, email, payment handles, panel connections and safety settings before your customers ever see it.

🔑 Set-up starts with one form

Your panels, email, payment methods and WHMCS details in one secure online form — passwords encrypted on submit. Your system is then built from our ready-made template, in your brand:
billingportal.io/onboard

Simple monthly pricing, based on active customers

Every plan is the full platform — billing, payments, panel automation, the Panel console, customer and mobile portals, and your branded TV app.

Starter

\$99 /month

Up to 250 active customers

For resellers moving off a panel-and-spreadsheet setup and ready to automate.

MOST POPULAR

Growth

\$179 /month

251 – 999 active customers

For established resellers who want every renewal, payment and panel action on autopilot.

Pro

\$275 /month

1,000+ active customers

For large operations running multiple panels, staff and a sub-reseller network.

Included in every plan

- Unlimited invoices
- Stripe, Venmo, Cash App, Zelle, PayPal
- Auto-renew & dunning
- XUI One · NXT · Best Panel
- Panel console
- Customer + mobile portal
- 4 shop layouts
- Branded TV app
- Your colours, portal to app
- Device ID & app logs
- Refer a Friend
- Profiles & watch history
- Tickets, KB, campaigns
- Your domain & SSL
- Nightly backups
- Updates & new features

Why more than WHMCS?

Because BillingPortal is also the back end of your customers' TV app. It stores every customer's profiles, Favorites and Continue Watching so their experience follows them to any device — and it replaces the third-party IPTV modules, the payment-matching busywork and the hours spent inside your panel.

See it working — today

Order a plan, get a line and open a ticket on our live demo — nothing is charged and it resets every night. Ask us for a guided tour of Admin and the Panel console.
